Overview of accessibility

Description of the building

The building with six above-ground and three underground floors is part of the university campus that was built in close proximity to the university hospital. The theoretical institutes of the faculty, the dean's office, support workplaces, the library, three lecture halls, seminar rooms, examination rooms with emergency facilities, laboratories, a simulation centre, study rooms, and a canteen are located here.

Entrance

The surface of the access walkway from Alej Svobody Street, where the nearest public transport stop is located, consists of concrete paving with a slight longitudinal slope (max. 6%).

The space in front of the main entrance at the level of the 1st above-ground floor is flat. The double doors of the main entrance open automatically to the sides. The width of the passage is sufficient.

Interior

The main entrance is followed by a spacious entrance hall with a reception area (counter height 115 cm). To the left of the reception, a corridor leads to a junction, which connects the main building of the faculty to the closely adjacent Biomedical Centre.

The entire main building is accessible. All floors are connected by four lifts (see Lifts).

The building includes 2 tiered lecture rooms: Green and Brown. Both are accessible from the 1st and 2nd above-ground floors. At the level of the upper entrance (2nd above-ground floor), a reserved place for a person with a wheelchair can be created by removing the seat in the last row. The third lecture room (Azure) on the 1st above-ground floor is level. The unmarked space for a person with a wheelchair is in front of the first row of seats.

The closed departments in the building are equipped with a doorbell (height 150 cm) and a chip reader (height 122 to 125 cm). Doors and other passages are a minimum of 80 cm wide. The manoeuvring space in the interior is sufficient.

Access to the utilitarian roof on the 4th above-ground floor is via a short staircase (4 steps up) with an inclined stair platform (load capacity 250 kg; manoeuvring area dimensions width 80 cm, depth 110 cm). The manoeuvring space on the lower and upper landings is sufficient. The platform is not self-service.

Lift

Four lifts of the same parameters are positioned in a row next to each other and are located by the main staircase.

The lifts (automatically opening door width 90 cm; cabin width 135 cm, depth 210 cm) connect the 3rd underground floor to the 6th above-ground floor. The manoeuvring space in front of the lifts is sufficient. The cabins are equipped with a pull-down seat, a handle (height 90 cm), and a mirror (bottom edge height 90 cm) on the front wall. There is a button panel at the entrances (height 120 cm) for all four lifts that is used to select the desired floor. There are only technical and safety controls in the cabins.

Sanitary facilities

There are a total of 14 accessible toilets in the building.

A pair of stalls in a mirror-image layout with the same parameters are available near the central staircase of the 2nd to 6th above-ground floors. The stalls (door width 90; stall width 214 to 218 cm, depth 186 cm) have a 90° reversed disposition (the toilet bowl is anchored to the side wall). The single-panel doors to the stalls are marked, and they open mechanically outwards. Access to the toilet bowl from the stall entrance is from the left/right. There is enough space for a wheelchair next to the toilet bowl (width min. 114 cm). The toilets are always equipped with one fixed and one pull-down handle.

A pair of accessible toilets on the 1st above-ground and 1st underground floors (near the canteen) also have a mirror-image layout. The dimensions and layout of the stalls (door width 90; stall width 182-192 cm, depth 220 cm) are similar. The single-panel doors to the stalls are marked, and they open mechanically outwards. Access to the toilet bowl (anchored on the rear wall) is from the left/right as seen from the entrance to the stall. There is enough space for a wheelchair next to the toilet bowl (minimum width 120 cm). The toilets are always equipped with one fixed and one pull-down handle.

Parking

There are 8 reserved parking spaces in the parking area in front of the main entrance.
