
Spatial orientation

The aim of this service is to improve orientation in the places and areas which the student frequents or will frequent during their study. Through counselling and practical training, the student learns how to move around independently in an unknown environment. Typically, the service is intended for students with visual impairment and possibly also students with mobility impairment.

The service is facilitated by the **Carolina Centre**. If you are interested, please contact **Mgr. Jana Vlasáková** (jana.vlasakova@ruk.cuni.cz; 224 491 604)
